Hi,

I'm a Mechanical Engineer with roughly 2 years of experience delivering prototype FEA and CAD analysis projects as well as CNC Programming. I would love the opportunity to further develop my current skills, and as such I am writing to apply for the Industrial Designer position in your reputable company.

Having worked in CAD Design Analysis, as well as multiple research and development projects in both a study and work capacity, you can expect a keen eye for detail and a strong working knowledge of computer-controlled manufacturing processes and machines. I maintain a thorough working knowledge of manufacturing processes and product development cycles and seek to consistently uphold a high standard of professionalism and work ethics. My aptitude in CAD and CAM is well above par, having completed numerous private projects (Water Pumps, Workshop Crane/ Lifts, Robotics).

I would love to schedule a phone conversation with you to discuss this opportunities further. Please let me know what times you're free; I'm available at (61) 497-166 742. Thank you for your time, and I look forward to talking. Kindly find attached my Resume for your persual. Australian work samples can be found in the document. I have Full work/ live/ and travel rights in Australia.

Kind Regards,

Shakeel Irfan
