

Hi Alogic team,

I am responding to your advertised position for an industrial designer because I am enthusiastic about design and consumer electronics. I believe I am a good fit for this role because I have studied Product Design Engineering and minored in Electric engineering.

Following university I worked at Scandia. Scandia manufacture wood heaters and gas heaters and distribute through Bunnings. At Scandia, I gained experience in all stages of the design process. I worked with a mechanical engineer, together we managed the current product range and designed new products. Managing the current product range included; implementing design improvements, ensuring overseas manufacturing went smoothly and assisting customers with installation queries. The design of new products included; idea generation, 3D modelling, prototyping, certifying products, and seeing them through to market.

I recently resigned from Scandia. It was a great experience and I learned a lot of valuable lessons. However, I felt it was time to make space for new opportunities. Since then I have been working as a casual at a design consultancy while studying graphic design.

I am excited to learn more about this opportunity and share how I will be a great fit for Alogic.

Kind regards,
Jaman
