

Dear Sir/Madam,

As you can see on my portfolio i am an industrial and digital product designer who had educated and had design experiences in three different country such as Turkey, Germany and China.

Originally i have my Bachelor's Degree from Anadolu University, Turkey. Although i studied as an Erasmus student did internship in Germany to improve mainly my design perspective. I also studied for a semester and did another internship to improve my production knowledge via another programme called Mevlana. I did two other internships in Turkey.

Since i am graduated in 2017 i am a freelancer. I worked in a startup company which is Ultralab in Ankara,Turkey. I was responsible both industrial and digital product design.

I believe design is universal and i tried to improve myself according to this belief. As you can see on my portfolio, i design and create in many fields because creations can appair themselves from everywhere and they feed each other trough to perfection.

I have a good knowledge about design fundamentals, creative thinking, 3D modeling, sketching and rendering. At the same time, i am an energetic, positive, creative and passionate designer who can easily get used to any environment.

I apply to this opening because i believe that i can be a good fit for Alogic and i would be happy to work with you.

You can see my portfolio at the link below:
